## Intelligent Indoor Positioning Analytics for Security

Mobile devices and Internet connected things are everywhere, but not all are speaking the same wireless language. Widespread rollout of high speed cellular means more devices are accessing the Internet via their phone carrier, bypassing Wi-Fi networks altogether. Bluetooth lets information be transmitted between small, easily concealable devices with no need for cellular or Wi-Fi. This can make monitoring devices difficult and management near impossible.

That's why it's critical that security tools–both physical and cyber–provide complete situational awareness of what connected things are present–regardless of whether they traditional cellular, Wi-Fi, or Bluetooth or an Internet of Things (IoT) device. Inpixon Indoor Position Analytics (IPA) is the first unified Real Time Location System (uRTLS) designed to deliver full scope real time location and monitoring and historical analytics of all mobile devices – cellular, Wi-Fi, and Bluetooth from a single security dashboard.

Display the location of all devices and distinguish between trusted and untrusted by color and alerts

Inpixon Indoor Positioning Analytics Benefits

- Improve both physical and cyber safety and security with total situational awareness of all cellular, Wi-Fi, and Bluetooth devices in an area

- Distinguish between trusted and untrusted devices

- Receive real time alerting to enforce "no phone / no device" zones

- Prevent security breaches and IP loss from devices that bypass traditional data security controls

- Augment traditional security policies with location-based controls

Inpixon Indoor Position Analytics Features

- Detect, locate, and monitor all cellular, Wi-Fi, and Bluetooth deivces, equipment and personnel devices on a live flor plan in real time

- Provide location accuracy down to sub-room level

- Alert in real time via Inpixon Insight dashboard, email and SMS

- Color-code "trusted" vs. "untrusted" devices for easy identification

- Connect to 3rd party systems, create zone-based security, document access policies, augment existing safety and security systems

- Rewind and play back events with DVR function

- Provide detailed insights into usage, flow, relationships, and more between personnel, assets, patients and visitors with Inpixon analytics

Tested and Proven Security

Inpixon IPA for Security delivers rock-solid situational awareness and security in some of the most demanding and secure environments in the world. From high security military installations and sensitive government facilities to manufacturing and healthcare facilities, Inpixon IPA is the choice for a powerful unified Real Time Location System.
